FIGURE A/C High Pressure Recirculating Switch(c)

- (1) Radiator Core Support
- (2) A/C Compressor and Condenser Hose
- (3) Headlamp Support
- (4) A/C High Pressure Recirculating Switch
- (5) A/C High Pressure Recirculating Switch Electrical Connector

Replaced switch with a pressure sensor from 2003-2007 Silverado. Use the 1999-2002 pressure port and location and installed wiring along the bottom of radiator shroud along side the headlight wiring harness. 2003-2007 pressure sensor is normally located on the engine near A/C compressor outlet so that sensor can be part of engine harness instead of body harness. Sensor port has schrader valve allowing removal and replacement with system charged. Both switch and sensor use the same style fitting.

Disconnect from A/C High Pressure Recirculate Switch and leave disconnected. Cap to prevent corrosion.
